LIFELINE

May 2015
(Someone to talk to...who understands)

Greetings to the members and supporters of the Harvey Floyd Chapter of Us TOO International.

Our support group vision is: “To provide the highest level of leadership, compassion and promotion of an enhanced understanding of prostate cancer while improving the quality of life for survivors, their families and men at risk through proactive programs and positions”.

Fusion Guided Prostate Biopsy

Recent technology offers Fusion Guide Biopsy blended with MRI and Ultrasound for a smarter way to look for Prostate Cancer. Fusion Guided Biopsy allows urologist to locate and identify aggressive and potentially lethal prostate tumors. This technology is important for men diagnosed with small, slow-growing prostate tumors and those on active surveillance by possibly reducing the number of biopsies they must undergo.

This procedure “fuses” detailed MRI scans with live, real-time ultrasound images of the prostate. A patient first undergoes the MRI scan. A radiologist reviews it and marks suspicious areas. Later an ultrasound probe is inserted into the rectum. As the probe is shifted, the fusion software shifts the overlaid MRI image giving a detailed 3-D ultrasound/MRI view. When the MRI and ultrasound images are fused, a clearer target to biopsy is revealed. The fused image guides the biopsy needles precisely to the area to be sampled, rather than just poking around hoping to find the tumor.

Our guest speaker for our May Support Group meeting is Dr. Patrick Springhart, M.D., chief urologist with Greenville Health System -Regional Urology. Our Topic is Fusion guided Prostate biopsy. We look forward to seeing each and everyone on Monday, May 4th beginning at 7:00 p.m.
